PROJECT 1 – FIT TRACK

1. Fit Track – Fitness & Workout Management Mobile Application | Figma | Main Project

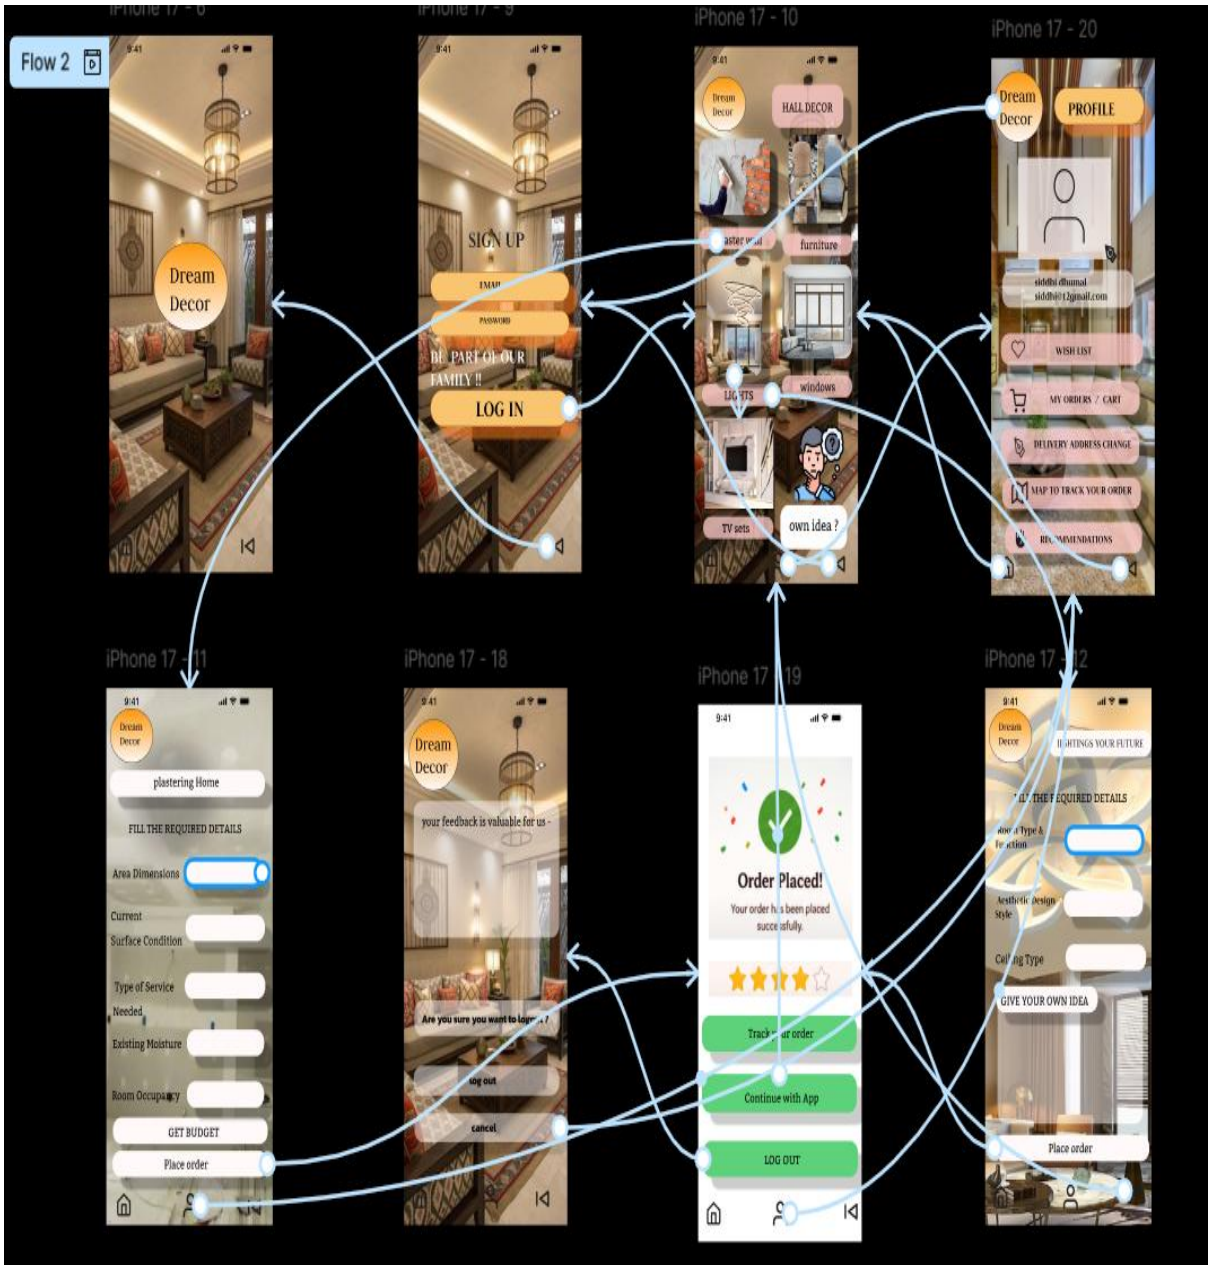

- Designed a mobile fitness application UI/UX concept to help users manage workouts, monitor fitness progress and explore training options.
- Created a connected user flow covering splash screen, onboarding, login, registration, fitness dashboard, workout plans and trainer booking.
- Designed membership plan screens, progress tracking, achievements, user profile and logout functionality.
- Used a consistent black and green visual theme, clear typography, intuitive navigation and reusable interface elements.
- Focused on user-friendly navigation, visual hierarchy, consistency and accessibility of important fitness information.
- Designed the screen flow to demonstrate how users move through the application and access its main features.

PROJECT 2 – HOME DECORE

- **2. Dream Decor – Home Decoration Mobile Application | Figma**

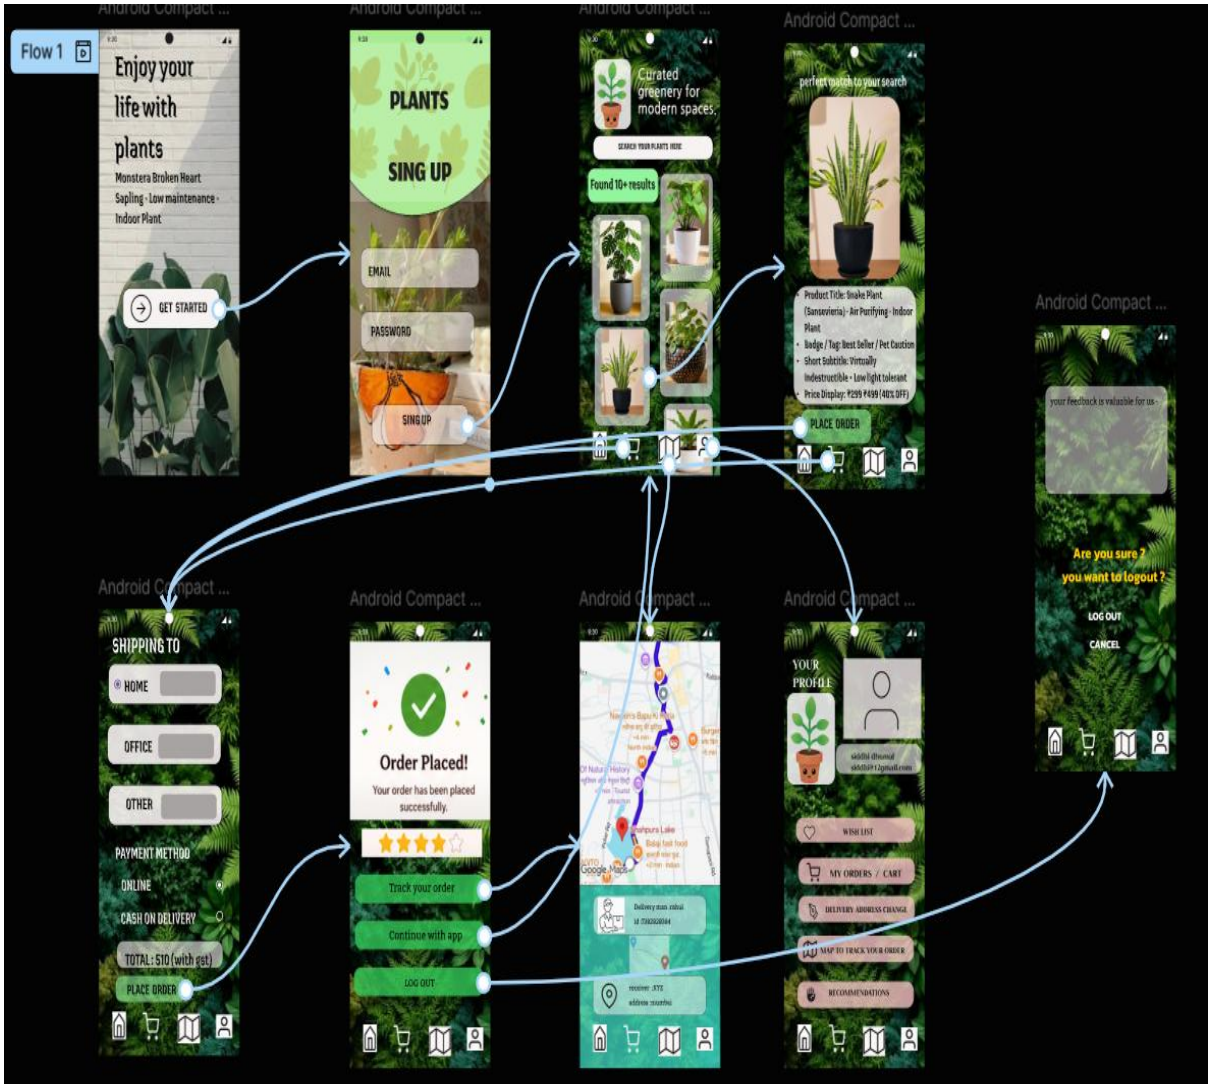

- Designed a mobile application UI concept for a home decoration service.
- Created connected screen flows for splash screen, sign-up, category selection and service requirement forms.
- Designed interfaces for furniture, lighting, wall decoration and home improvement services.
- Focused on visual consistency, typography, colour combinations, navigation and user-friendly form layouts.
- Created a connected screen flow to demonstrate the user's journey through the application.

PROJECT 3 - **Plant Shopping Mobile Application | Figma**

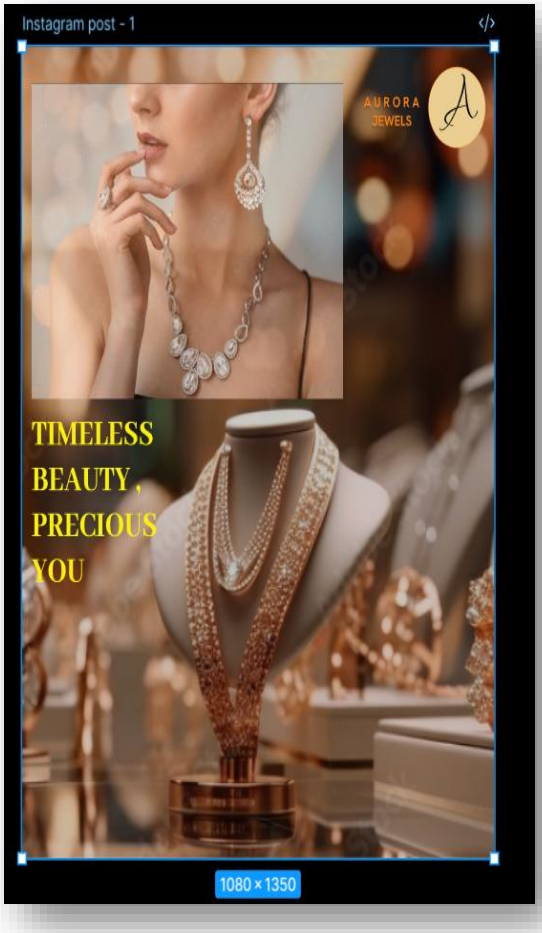

- Designed a mobile application concept for plant discovery and shopping.
- Created connected mobile screens covering onboarding, user registration, plant browsing and shopping-related interactions.
- Used a consistent green-themed visual style, clear layouts and intuitive navigation.

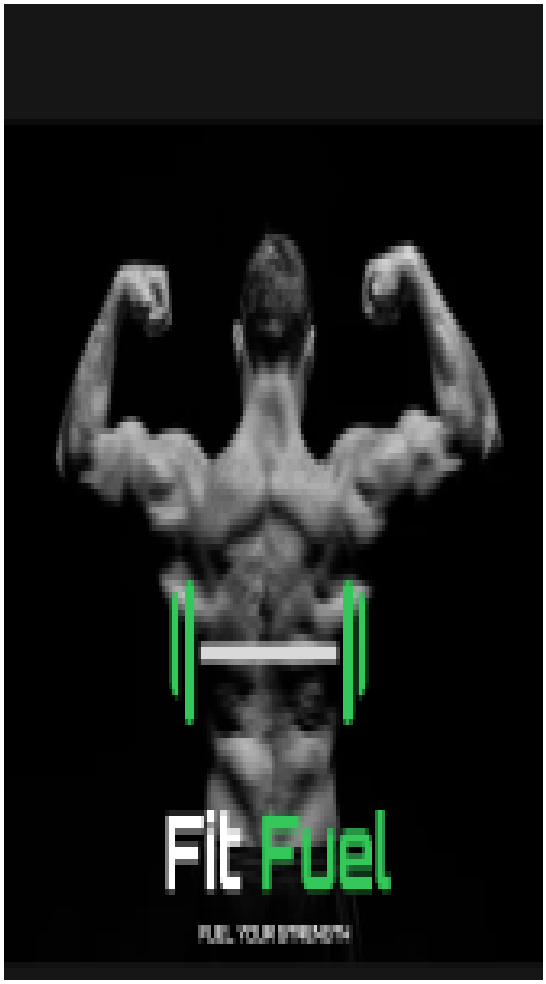

Focused on making the browsing and shopping experience simple and engaging

Power BI Sales Performance Dashboard

An interactive sales analysis dashboard built using Microsoft Power BI to analyse sales performance, profitability, product categories, and regional sales trends.

Tools Used

- Microsoft Power BI Desktop
- Microsoft Excel
- DAX (Data Analysis Expressions)

Dashboard Features

- KPI cards: Total Sales, Total Profit, Total Orders, and Profit Margin
- Geographic sales analysis using a map
- Monthly sales trend analysis
- Sales comparison by product category
- Interactive slicers for city, category, and date
- Matrix heatmap with conditional formatting
- Drill-through for detailed analysis

Dataset

The project uses sample sales transaction data for learning and portfolio demonstration.

Key Learnings

- Data import and preparation
- DAX measures and calculations
- Data visualisation and dashboard design
- Interactive filtering and drill-through analysis

Disclaimer

- The dataset is synthetic and intended for educational and portfolio purposes.
